

BODY TEMPERATURE SCANNING KIOSK

The Body Temperature Scanning Kiosk is a contact-free solution that assesses and monitors the health of staff and guests. The kiosk features infrared thermography testing to measure body temperatures, as well as facial recognition technology and binocular liveness detection to identify the users and register their temperature readings. With an 8" touchscreen display and a 3-color light indicator, the kiosk gives operators and managers a reliable way to determine individual health statuses quickly and accurately without touching a thermometer.
